

The background is a grayscale, low-poly map of the world. The continents are represented by a network of interconnected triangles, creating a faceted, geometric appearance. The map is centered on the Atlantic Ocean, with North and South America on the left and Europe and Africa on the right. A white rectangular box is positioned on the left side of the image, containing the title and authors' names.

The US is trying to use export controls to restrict Huawei's access to semiconductors

Chad P. Bown (PIIE)
October 13, 2020

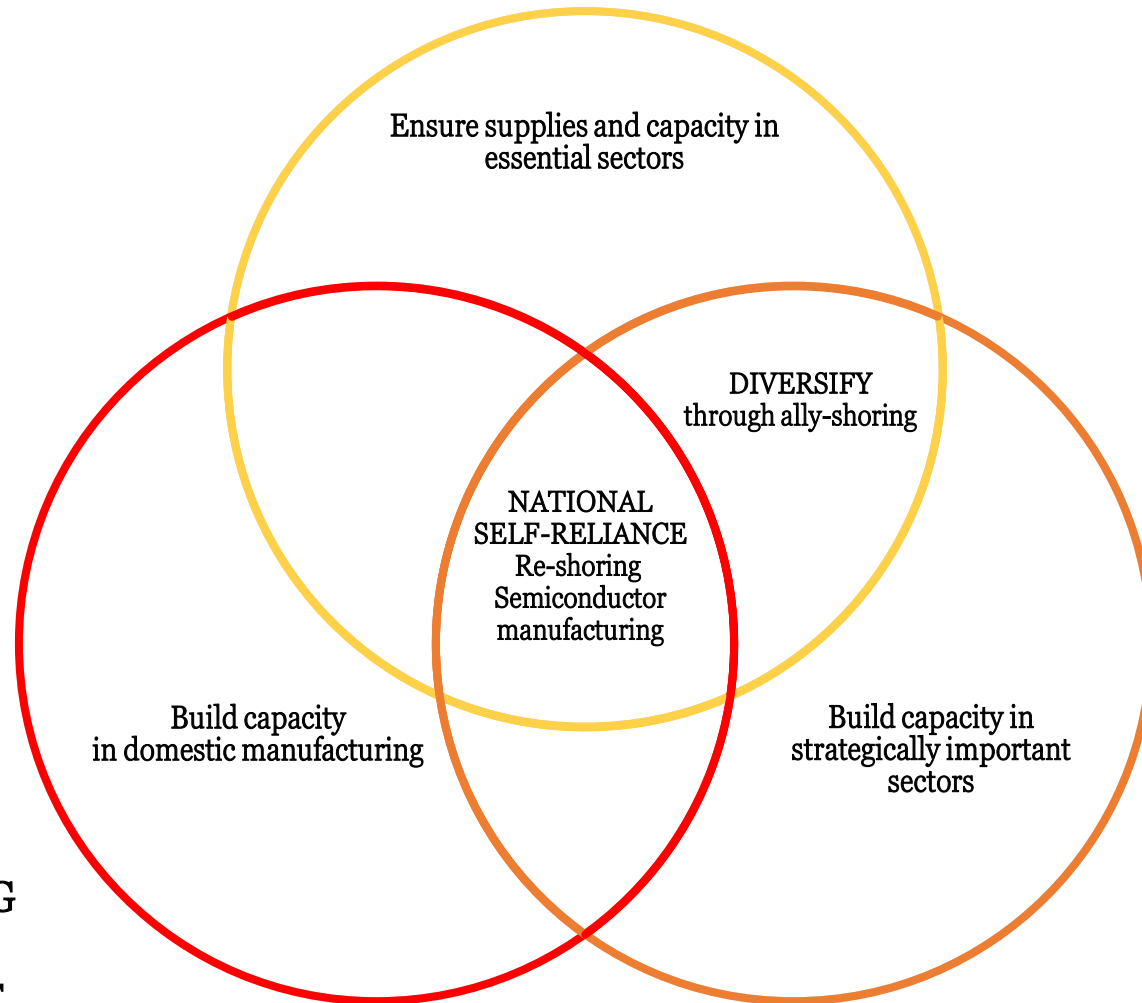

The US is trying to use export controls to restrict Huawei's access to semiconductors

Effect of 2019 and 2020 export controls on semiconductor supply chains

- US firms cannot sell to Huawei or Hissilcon as a result of 2019 export controls
- US firms cannot sell to foreign firm if it sells to Huawei as a result of 2020 export controls
- Foreign firms cannot sell to Huawei using US inputs as a result of 2020 export controls but can sell to Huawei using non-US inputs
- Sales currently unconstrained by US export controls
